

Infrastructure:

The Physics Department is well equipped with applied and engineering physics laboratories for training undergraduate students. The students lab includes facilities for several experiments in Optics and Modern Physics. In addition to the undergraduate laboratory, the department also houses adequately equipped research laboratories for conducting research in areas related to materials science and molecular biophysics. The following are some of the facilities available at our research laboratories:

- Hot Air Oven
- Muffled Furnace
- DC-Conductivity Measurement setup
- Pellet Making Machine
- UV-Spectrophotometer
- LCR Bridge
- Plate Reader
- Cold Cabinets
- Deep Freezers
- Centrifuges
- Shaker-Incubators
- Ice Maker
